

Please do not block XM Radio from broadcasting information such as weather or traffic. XM Radio is innovative and creative. Controlling information, other than that which violates ethics or morals, is not acceptable. In other words, I would object to a government which finds it necessary to protect established businesses from innovation by violating our free enterprise system. Weather and traffic updates are worthwhile services, and pose no threat to our morals or ethics. Let the our commercial freedoms work! I expect our government to protect America's unique freedoms and liberties.
